Hybrid Collard

Cash Crop

DESCRIPTION: Cash Crop has a vigorous upright plant habit with long petioles ideal for bunching. High tolerance to bolting. Deep green leaf color and flat leaf surface, Cash Crop has excellent re-growth rates with high leaf count. It can be stripped as early as 50 days from transplant and allowed to regrow. Fine vein extension presentation.

MATURITY: Full maturity is approximately 75 days from transplant, but can extend to over 100 days

COMPARABLE VARIETIES: F1 Flash, F1 Bulldog, Georgia (open pollinated)

CULTURAL CHARACTERISTICS: Use best agricultural practices, IPM for foliar disease management, good fertility management for re-growth multiple harvest. Easy to harvest with good internode separation.

MARKETS: Fresh market bunch Georgia, South Carolina, North Carolina, Texas, California, Florida

ADAPTABILITY: Best suited for summer-fall, mid-spring harvest

FEATURES

- High uniformity for maturity
- Excellent re-growth speed rates
- Smooth, dark green color leaf surface
- Long petiole length – leaf ratio

BENEFITS

- Cost effective harvesting
- High yield recovery rates
- Consumer appeal
- Ease of bunching harvest, limits mechanical injury

Descriptions, illustrations, photos and disease resistance, etc. are based upon the results obtained under favorable conditions and certain races of pathogens/diseases. Identical results are not guaranteed nor implied for all growing conditions. Information is based on average data compiled. Physical characteristics, adaptability and disease tolerance may vary under different conditions.
